# C++ static code analysis

Unique rules to find Bugs, Vulnerabilities, Security Hotspots, and Code Smells in your C++ code

All rules 578 | Vulnerability 13 | Bug 111 | Security Hotspot 18 | Code Smell 436 | Quick Fix 68

Tags

Search by name...

"memset" should not be used to delete sensitive data
Vulnerability

POSIX functions should not be called with arguments that trigger buffer overflows
Vulnerability

XML parsers should not be vulnerable to XXE attacks
Vulnerability

Function-like macros should not be invoked without all of their arguments
Bug

The address of an automatic object should not be assigned to another object that may persist after the first object has ceased to exist
Bug

Assigning to an optional should directly target the optional
Bug

Result of the standard remove algorithms should not be ignored
Bug

"std::scoped_lock" should be created with constructor arguments
Bug

Objects should not be sliced
Bug

Immediately dangling references should not be created
Bug

"pthread_mutex_t" should be unlocked in the reverse order they were locked
Bug

"pthread_mutex_t" should be properly initialized and destroyed
Bug

"pthread_mutex_t" should not be consecutively locked or unlocked twice

## Integer literals should not be cast to bool

Analyze your code

Code Smell | Major | Quick Fix | bad-practice clumsy

Even though C++ provides "true" and "false" as boolean literals, it allows using integer literals in places where boolean type is expected. This can be done through implicit or explicit casting.

In contexts where boolean type is expected, integral literals should be avoided. Using boolean literals instead would make your code more readable and less error-prone.

### Noncompliant Code Example

```
void f(){
  bool isX = 1; // Noncompliant
  bool isY = 0; // Noncompliant
  bool ternaryIsX = isX ? 1 : isY; // Noncompliant
  bool cCast= (bool)0; // Noncompliant
  bool cppCast= static_cast<bool>(1); // Noncompliant
  if(1) { // Noncompliant
     ...
  }
}
```

### Compliant Solution

```
void f(){
 bool isX = true;
 bool isY = false;
 bool ternaryIsX = isX ? true : isY;
 bool cCast= false;
 bool cppCast= true;
 if(true) {
     ...
  }
}
```

sonarlint | sonarcloud | sonarqube Developer Edition

Bug

"std::move" and "std::forward" should not be confused

Bug

A call to "wait()" on a "std::condition_variable" should have a condition

Bug

A pointer to a virtual base class shall only be cast to a pointer to a derived class by means of dynamic_cast

Bug

Functions with "noreturn" attribute should not return

Bug

RAII objects should not be temporary

Bug

"memcmp" should only be called with pointers to trivially copyable types with no padding

Bug

"memcpy", "memmove", and "memset" should only be called with pointers to trivially copyable types

Bug

"std::auto_ptr" should not be used

Bug

Destructors should be "noexcept"

Bug
