"memset" should not be used to delete sensitive data
Vulnerability

POSIX functions should not be called with arguments that trigger buffer overflows
Vulnerability

XML parsers should not be vulnerable to XXE attacks
Vulnerability

Function-like macros should not be invoked without all of their arguments
Bug

The address of an automatic object should not be assigned to another object that may persist after the first object has ceased to exist
Bug

Assigning to an optional should directly target the optional
Bug

Result of the standard remove algorithms should not be ignored
Bug

"std::scoped_lock" should be created with constructor arguments
Bug

Objects should not be sliced
Bug

Immediately dangling references should not be created
Bug

"pthread_mutex_t" should be unlocked in the reverse order they were locked
Bug

"pthread_mutex_t" should be properly initialized and destroyed
Bug

"pthread_mutex_t" should not be consecutively locked or unlocked twice

Condition-specific "catch" handlers should not be used after the ellipsis (catch-all) handler

Analyze your code

Bug | Major | unused | misra-c++2008

The catch-all handler should come last in a chain of `catch` or `@catch` statements because it catches everything, and any more-specific `catch`/`@catch` that comes after it will never be used, even when the relevant condition occurs.

This C++ code sample is very similar to the Objective-C equivalent with `@try` and `@catch`.

Noncompliant Code Example

```
void f1()
{
  try
  {
    // ...
  }
  catch (...)
  {
    // Handle all exception types
  }
  catch (std::exception const &e)  // Noncompliant - handler
  {
  }
}
```

Compliant Solution

```
void f1()
{
  try
  {
    // ...
  }
  catch (std::exception const &e)  // Compliant
  {
    // Handle standard exceptions
  }
  catch (...)        // Compliant catch-all handler
  {
    // Handle all other exception types
  }
}
```

See

- MISRA C++:2008, 15-3-7 - Where multiple handlers are provided in a single try-catch statement or function-try-block, any ellipsis (catch-all) handler shall occur last.

Bug

"std::move" and "std::forward" should not be confused

Bug

A call to "wait()" on a "std::condition_variable" should have a condition

Bug

A pointer to a virtual base class shall only be cast to a pointer to a derived class by means of dynamic_cast

Bug

Functions with "noreturn" attribute should not return

Bug

RAII objects should not be temporary

Bug

"memcmp" should only be called with pointers to trivially copyable types with no padding

Bug

"memcpy", "memmove", and "memset" should only be called with pointers to trivially copyable types

Bug

"std::auto_ptr" should not be used

Bug

Destructors should be "noexcept"
