C++ static code analysis

Unique rules to find Bugs, Vulnerabilities, Security Hotspots, and Code Smells in your C++ code

All rules 578 | Vulnerability 13 | Bug 111 | Security Hotspot 18 | Code Smell 436 | Quick Fix 68

Tags

Search by name...

"memset" should not be used to delete sensitive data
Vulnerability

POSIX functions should not be called with arguments that trigger buffer overflows
Vulnerability

XML parsers should not be vulnerable to XXE attacks
Vulnerability

Function-like macros should not be invoked without all of their arguments
Bug

The address of an automatic object should not be assigned to another object that may persist after the first object has ceased to exist
Bug

Assigning to an optional should directly target the optional
Bug

Result of the standard remove algorithms should not be ignored
Bug

"std::scoped_lock" should be created with constructor arguments
Bug

Objects should not be sliced
Bug

Immediately dangling references should not be created
Bug

"pthread_mutex_t" should be unlocked in the reverse order they were locked
Bug

"pthread_mutex_t" should be properly initialized and destroyed
Bug

"pthread_mutex_t" should not be consecutively locked or unlocked twice

Pointer and reference local variables should be "const" if the corresponding object is not modified

Analyze your code

Code Smell | Minor | Quick Fix | based-on-misra bad-practice

This rule leads to greater precision in the definition of local variables by making the developer intention about modifying the variable explicit. The `const` qualification shall be applied to the object pointed to, not to the pointer, since it is the object itself that is being protected.

Noncompliant Code Example

```
std::string& getString();
void myfunc()
{
  std::string& s = getString(); // Noncompliant
  if (s.size()) {
   std::cout << s;
  }
}
```

Compliant Solution

```
std::string& getString();
void myfunc () {
  const std::string& x = getString();
  if (s.size()) {
    std::cout << s;
  }
}
```

See

- MISRA C:2012, 8.13 - A pointer should point to a const-qualified type whenever possible

sonarlint | sonarcloud | sonarqube Developer Edition

Bug

"std::move" and "std::forward" should not be confused

Bug

A call to "wait()" on a "std::condition_variable" should have a condition

Bug

A pointer to a virtual base class shall only be cast to a pointer to a derived class by means of dynamic_cast

Bug

Functions with "noreturn" attribute should not return

Bug

RAII objects should not be temporary

Bug

"memcmp" should only be called with pointers to trivially copyable types with no padding

Bug

"memcpy", "memmove", and "memset" should only be called with pointers to trivially copyable types

Bug

"std::auto_ptr" should not be used

Bug

Destructors should be "noexcept"
