Tags

Search by name...

"memset" should not be used to delete sensitive data

 Vulnerability

POSIX functions should not be called with arguments that trigger buffer overflows

 Vulnerability

XML parsers should not be vulnerable to XXE attacks

 Vulnerability

Function-like macros should not be invoked without all of their arguments

 Bug

The address of an automatic object should not be assigned to another object that may persist after the first object has ceased to exist

 Bug

Assigning to an optional should directly target the optional

 Bug

Result of the standard remove algorithms should not be ignored

 Bug

"std::scoped\_lock" should be created with constructor arguments

 Bug

Objects should not be sliced

 Bug

Immediately dangling references should not be created

 Bug

"pthread\_mutex\_t" should be unlocked in the reverse order they were locked

 Bug

"pthread\_mutex\_t" should be properly initialized and destroyed

 Bug

"pthread\_mutex\_t" should not be consecutively locked or unlocked twice

### Boolean expressions should not be gratuitous

Analyze your code

 Code Smell

 Major ?

 cwe based-on-misra cert misra-c2004 suspicious redundant misra-c2012

If a boolean expression doesn't change the evaluation of the condition, then it is entirely unnecessary, and can be removed. If it is gratuitous because it does not match the programmer's intent, then it's a bug and the expression should be fixed.

#### Noncompliant Code Example

```
a = true;
if (a) { // Noncompliant
    doSomething();
}

if (b && a) { // Noncompliant; "a" is always "true"
    doSomething();
}

if (c || !a) { // Noncompliant; "!a" is always "false"
    doSomething();
}
```

#### Compliant Solution

```
a = true;
if (foo(a)) {
    doSomething();
}

if (b) {
    doSomething();
}

if (c) {
    doSomething();
}
```

#### See

- MISRA C:2004, 13.7 - Boolean operations whose results are invariant shall not be permitted.
- MISRA C:2012, 14.3 - Controlling expressions shall not be invariant
- [MITRE, CWE-571](#) - Expression is Always True
- [MITRE, CWE-570](#) - Expression is Always False
- [CERT, MSC12-C](#) - Detect and remove code that has no effect or is never executed
