Search by name...

"memset" should not be used to delete sensitive data

Vulnerability

POSIX functions should not be called with arguments that trigger buffer overflows

Vulnerability

XML parsers should not be vulnerable to XXE attacks

Vulnerability

Function-like macros should not be invoked without all of their arguments

Bug

The address of an automatic object should not be assigned to another object that may persist after the first object has ceased to exist

Bug

"pthread_mutex_t" should be unlocked in the reverse order they were locked

Bug

"pthread_mutex_t" should be properly initialized and destroyed

Bug

"pthread_mutex_t" should not be consecutively locked or unlocked twice

Bug

Functions with "noreturn" attribute should not return

Bug

"memcpy" should only be called with pointers to trivially copyable types with no padding

Bug

The "sizeof" and "alignof" operator should not be used with operands of a "void" type

Analyze your code

Bug Minor lock-in

Although some compilers will allow it, the use of `sizeof` and `alignof` with arguments that have a `void` type is forbidden by both the C and C++ standards.

Noncompliant Code Example

```
void fun() {
    void* p;
    sizeof(*p); // Noncompliant
    sizeof(void); // Noncompliant
    alignof(*p); // Noncompliant
    alignof(void); // Noncompliant
}
```
