"memset" should not be used to delete sensitive data	•
❸ Vulnerability	
POSIX functions should not be called with arguments that trigger buffer overflows	
XML parsers should not be vulnerable to XXE attacks	
Function-like macros should not be invoked without all of their arguments	
The address of an automatic object should not be assigned to another object that may persist after the first object has ceased to exist ## Bug	
"pthread_mutex_t" should be unlocked in the reverse order they were locked	
"pthread_mutex_t" should be properly initialized and destroyed	
"pthread_mutex_t" should not be consecutively locked or unlocked	

twice # Bug

👬 Bug

👬 Bug

Functions with "noreturn" attribute

"memcmp" should only be called with pointers to trivially copyable types with no padding

should not return

```
Collapsible "if" statements should
                                           Analyze your code
be merged
clumsy
Merging collapsible if statements increases the code's readability.
Noncompliant Code Example
  if (condition1) {
   if (condition2) {
                                  // NonCompliant
  }
Compliant Solution
  if (condition1 && condition2) { // Compliant
 Available In:
 sonarlint o sonarcloud o sonarqube Developer Edition
```
