overflows  A Vulnerability  XML parsers should not be vulnerable to XXE attacks  Vulnerability  Function-like macros should not be invoked without all of their arguments  Bug  The address of an automatic object should not be assigned to another object that may persist after the first object has ceased to exist  Bug  "pthread_mutex_t" should be unlocked in the reverse order they were locked  Bug  "pthread_mutex_t" should be properly initialized and destroyed  Bug  "pthread_mutex_t" should not be consecutively locked or unlocked	
sensitive data  Vulnerability  POSIX functions should not be called with arguments that trigger buffer overflows  Vulnerability  XML parsers should not be vulnerable to XXE attacks  Vulnerability  Function-like macros should not be invoked without all of their arguments and bus assigned to another object that may persist after the first object has ceased to exist  Bug  "pthread_mutex_t" should be unlocked in the reverse order they were locked  Bug  "pthread_mutex_t" should be properly initialized and destroyed  Bug  "pthread_mutex_t" should not be consecutively locked or unlocked twice	
Consequence of the consecutively but the consecutively locked or unlocked twice  Wulnerability  Consequence of the consecutively locked or unlocked twice  Wulnerability  Consequence of the consecutively locked or unlocked twice  Wulnerability  Function-like macros should not be invoked without all of their arguments to their arguments of the consecutively locked or unlocked twice  Wulnerability  Function-like macros should not be invoked without all of their arguments object should not be assigned to another object that may persist after the first object has ceased to exist the reverse order they were locked to the reverse order they were locked to the consecutively locked or unlocked twice	
POSIX functions should not be called with arguments that trigger buffer overflows  Vulnerability  XML parsers should not be vulnerable to XXE attacks  Vulnerability  Function-like macros should not be invoked without all of their arguments Bug  The address of an automatic object should not be assigned to another object that may persist after the first object has ceased to exist  Bug  "pthread_mutex_t" should be unlocked in the reverse order they were locked  Bug  "pthread_mutex_t" should be properly initialized and destroyed  Bug  "pthread_mutex_t" should not be consecutively locked or unlocked twice	
with arguments that trigger buffer overflows  Vulnerability  XML parsers should not be vulnerable to XXE attacks  Vulnerability  Function-like macros should not be invoked without all of their arguments  Bug  The address of an automatic object should not be assigned to another object that may persist after the first object has ceased to exist  Bug  "pthread_mutex_t" should be unlocked in the reverse order they were locked  Bug  "pthread_mutex_t" should be properly initialized and destroyed  Bug  "pthread_mutex_t" should not be consecutively locked or unlocked twice	
XML parsers should not be vulnerable to XXE attacks  Vulnerability  Function-like macros should not be invoked without all of their arguments  Bug  The address of an automatic object should not be assigned to another object that may persist after the first object has ceased to exist  Bug  "pthread_mutex_t" should be unlocked in the reverse order they were locked  Bug  "pthread_mutex_t" should be properly initialized and destroyed  Bug  "pthread_mutex_t" should not be consecutively locked or unlocked twice	POSIX functions should not be called with arguments that trigger buffer overflows
to XXE attacks  Vulnerability  Function-like macros should not be invoked without all of their arguments  Bug  The address of an automatic object should not be assigned to another object that may persist after the first object has ceased to exist  Bug  "pthread_mutex_t" should be unlocked in the reverse order they were locked  Bug  "pthread_mutex_t" should be properly initialized and destroyed  Bug  "pthread_mutex_t" should be properly initialized and destroyed  Typthread_mutex_t" should not be consecutively locked or unlocked twice	<b>⑥</b> Vulnerability
Function-like macros should not be invoked without all of their arguments	XML parsers should not be vulnerable to XXE attacks
invoked without all of their arguments  Bug  The address of an automatic object should not be assigned to another object that may persist after the first object has ceased to exist  Bug  "pthread_mutex_t" should be unlocked in the reverse order they were locked  Bug  "pthread_mutex_t" should be properly initialized and destroyed  Bug  "pthread_mutex_t" should be properly initialized and destroyed  The bug  "pthread_mutex_t" should not be consecutively locked or unlocked twice	
The address of an automatic object should not be assigned to another object that may persist after the first object has ceased to exist  Bug  "pthread_mutex_t" should be unlocked in the reverse order they were locked  Bug  "pthread_mutex_t" should be properly initialized and destroyed  Bug  "pthread_mutex_t" should not be consecutively locked or unlocked twice	
should not be assigned to another object that may persist after the first object has ceased to exist  Bug  "pthread_mutex_t" should be unlocked in the reverse order they were locked  Bug  "pthread_mutex_t" should be properly initialized and destroyed  Bug  "pthread_mutex_t" should not be consecutively locked or unlocked twice	🐧 Bug
"pthread_mutex_t" should be unlocked in the reverse order they were locked the Bug  "pthread_mutex_t" should be properly initialized and destroyed  Bug  "pthread_mutex_t" should not be consecutively locked or unlocked twice	
in the reverse order they were locked  Bug  "pthread_mutex_t" should be properly initialized and destroyed  Bug  "pthread_mutex_t" should not be consecutively locked or unlocked twice	<b>♣</b> Bug
"pthread_mutex_t" should be properly initialized and destroyed  Bug  "pthread_mutex_t" should not be consecutively locked or unlocked twice	
initialized and destroyed  Bug  "pthread_mutex_t" should not be consecutively locked or unlocked twice	<b>ਜ਼</b> Bug
"pthread_mutex_t" should not be consecutively locked or unlocked twice	"pthread_mutex_t" should be properly initialized and destroyed
consecutively locked or unlocked twice	<b>♣</b> Bug
<b>fi</b> Bug	
	"pthread_mutex_t" should not be consecutively locked or unlocked twice

should not return

"memcmp" should only be called with pointers to trivially copyable types with no padding
