C++ static code analysis

Unique rules to find Bugs, Vulnerabilities, Security Hotspots, and Code Smells in your C++ code

o Security **⊗** Code (436) O Quick 68 Fix All 578 **R** Bug (111) 6 Vulnerability 13 rules Hotspot Tags Search by name... "memset" should not be used to delete "extern" shouldn't be used on sensitive data Analyze your code member definitions Vulnerability 🙀 Bug 🔷 Major 🕝 unused POSIX functions should not be called

with arguments that trigger buffer overflows Data members and member functions cannot be defined as external, although entire ♠ Vulnerability objects can. When a member is declared as extern, the compiler simply ignores the keyword, making it both extraneous and confusing.

Noncompliant Code Example

```
class C {
  void fun();
};
extern void C::fun() { // Noncompliant
```

Compliant Solution

```
class C {
   void fun();
void C::fun() {
Available In:
sonarlint 😁 | sonarcloud 🙆 | sonarqube | Developer
```

I
🖟 Bug
"std::move" and "std::forward" should not be confused
∰ Bug
A call to "wait()" on a "std::condition_variable" should have a condition
n Bug
A pointer to a virtual base class shall only be cast to a pointer to a derived class by means of dynamic_cast
ਜ਼ਿ Bug
Functions with "noreturn" attribute should not return
👬 Bug
RAII objects should not be temporary
्रे Bug
"memcmp" should only be called with pointers to trivially copyable types with no padding
🙃 Bug
"memcpy", "memmove", and "memset" should only be called with pointers to trivially copyable types
🙃 Bug
"std::auto_ptr" should not be used
n Bug
Destructors should be "noexcept"
🖟 Bug
